

## Template: Deliverable 4: Wireframes & Feature Plan

CSC425 Fall 2025

Student Name: K.C. Cabiness

Date Submitted: 9/21/25

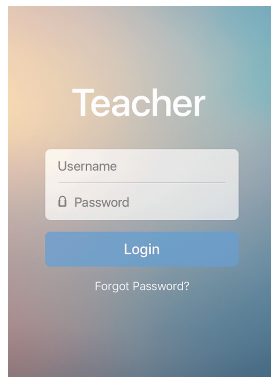

GitHub REPO URL: <https://github.com/sameerthapax/Multi-Page-Website>

Branch Name: D4-KC-Cabiness

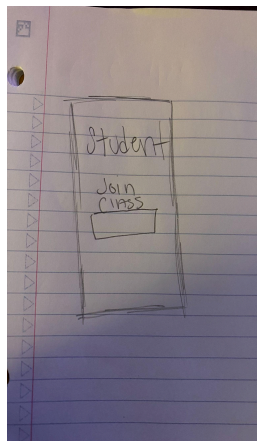

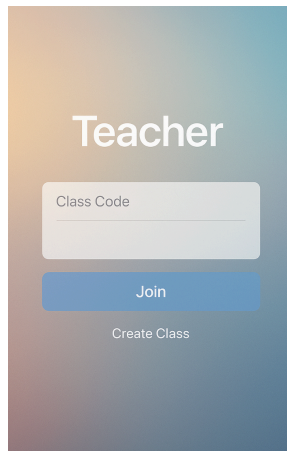

### 1. Low-Fidelity Wireframes (Mobile-First)

Insert/export images of your sketches or digital mockups. Each wireframe should be clearly labeled.

- Teacher Login Screen (concept)

- Dashboard Screen (Student) and (Teacher)

- Additional Major Screens (if applicable)

## 2. Functional Requirements

Provide a bullet-point list of core app features. Be concise but detailed enough to show scope.

- Teacher authentication (sign up, login, logout)
- CRUD for the teacher to edit who and how many are in class
- Navigation between core pages (Login → Dashboard → Features)
- Data persistence with backend integration
- Error handling & input validation
- Set time to ask question from the students

Allow Students to see the topics the teacher is on

## 3. User Stories

Provide 3–5 detailed user stories following the required format.

1. As a teacher, I would like to log in to the app and set my class up so that students can join
2. As a teacher, I would like my unit topics to pop up so that my students can know what topic we are on.
3. As a student, I would like to be able to join my teacher's classroom anonymously and ask questions.
- 4.

## 4. User Journey Flow

Choose one format: flow diagram (preferred) or a step-by-step written description.

### Option B: Written Description

1. Teacher opens app → sees login screen.
2. Teacher logs in successfully → redirected to dashboard where they can create class code
3. Teacher/Student selects feature ("Create code"/"join classroom") → form appears.
4. Teacher submits → confirmation shown, data saved.
5. Teacher logs out → session ends.

This is my individual submission. The team will review all submissions and agree on a final version for project continuation.
